OVERVIEW

Secure financial operations against evolving vulnerabilities

vRx simplifies vulnerability management with automated, end-to-end remediation that spans your entire IT environment. Safeguard your financial services, enhance compliance, and ensure uninterrupted operations with minimal effort.

SOLUTION

Vulnerability Remediation for Finance

Optimize IT Operations

Resource-intensive manual processes slow down response times. vRx's automation streamlines vulnerability discovery, prioritization, and remediation, reducing manual workloads and freeing up your teams to focus on high-value tasks and strategic initiatives.

Enhance Compliance and Risk Management

vRx helps maintain compliance by providing complete visibility into assets, automating vulnerability tracking, and simplifying report generation. With vRx, your organization can stay ahead of regulatory demands and easily demonstrate compliance to auditors and stakeholders.

Protect Critical Systems

Keeping legacy and mission-critical systems secure without disrupting daily operations is a significant challenge in finance. vRx's advanced remediation capabilities, like Patchless Protection, help protect these essential assets, minimizing the risk of downtime and keeping operations running smoothly.

FEATURES

Key features for financial institutions

Automated Remediation

vRx maintains a log of all your assets at all times. It monitors your systems in real-time and automatically implements remediation processes when needed. This includes automatic patch deployment, as well as advanced capabilities like Patchless Protection and scripting solutions, enabling your IT teams to maintain security with minimal manual effort.

Smart Prioritization

Traditional vulnerability management relies heavily on CVSS scores, which can overlook real-world risks. vRx employs a sophisticated prioritization method that evaluates factors such as exploitability and potential impact on business operations. This intelligent prioritization ensures that your teams focus on the most critical vulnerabilities, enhancing your overall risk management strategy.

Broad Third-Party Coverage

vRx provides extensive coverage for thousands of third-party applications, enabling your organization to manage vulnerabilities across your entire technology stack from a single platform. This reduces the need for multiple tools, streamlining operations and enhancing visibility into your security posture.

★★★★★

Consolidation & third-party patching is particularly valuable

With vRx, we can patch in real time, especially for our end-user systems —reducing our remediation cycle from once every three months to within the week.
