vIntelligence

By Vicarius – Exposure Assessment and Validation Platform

Stop triaging noise. Start fixing real risks.

vIntelligence is the first continuous exposure intelligence and validation platform, ingesting data from your entire security stack, eliminating false positives with AI-powered exposure testing, and connecting natively to vRx for automated remediation. From detection to proof of closure, in one platform.

95% Noise Reduction

Why vIntelligence

Eliminate Alert Overload

95%+ of vulnerability alerts are false positives. vIntelligence validates every exposure through AI-powered exploit testing before surfacing it, so your team sees only confirmed, actionable risks.

Unify Your Security Stack

Connect Tenable, Qualys, Rapid7 and many other tools into a single normalized risk view. No more conflicting severity scores or siloed data, one accurate, continuously-updated picture of your true exposure.

Match Attacker Speed

Exploits go from zero-day to weaponized in less than 24 hours. vIntelligence validates and prioritizes in minutes, not weeks, giving defenders a real fighting chance against AI-accelerated threats.

Prove You Fixed It

Every remediation is re-validated with proof of closure, giving security leaders and boards auditable evidence for SEC, NIS2, and DORA compliance.

Key Features

Universal Intelligence Normalization

Ingest data from any vendor. Normalize millions of data points through a 5-stage pipeline.

AI Red Team - Agentic Validation

AI agents auto-generate and execute custom exploit scripts to confirm real exploitability in your environment. Zero production disruption. Minutes, not months.

Threat Intelligence Enrichment

Cross-references intelligence sources for EPSS, CISA KEV, and MITRE ATT&CK. Risk scores reflect real-world exploitability, not just theoretical CVSS severity.

Re-Validation & Proof of Closure

After every fix, vIntelligence re-runs exposure validation to confirm the vulnerability is truly resolved. 100% of remediations are verified, not assumed.

Automated Remediation via vRx

Native integration with vRx executes patching, scripting, and configuration fixes automatically.

AI Chat & Natural Language Queries

Ask vIntelligence questions in plain English. Get instant answers about exposure posture, asset risk, and remediation priorities, no query language needed.

vicarius

Key benefits

Security Operations

Cut triage time by 81%, only confirmed, exploitable vulnerabilities reach your queue. Sub-second risk updates as new threats emerge, no more waiting for the next scan cycle.

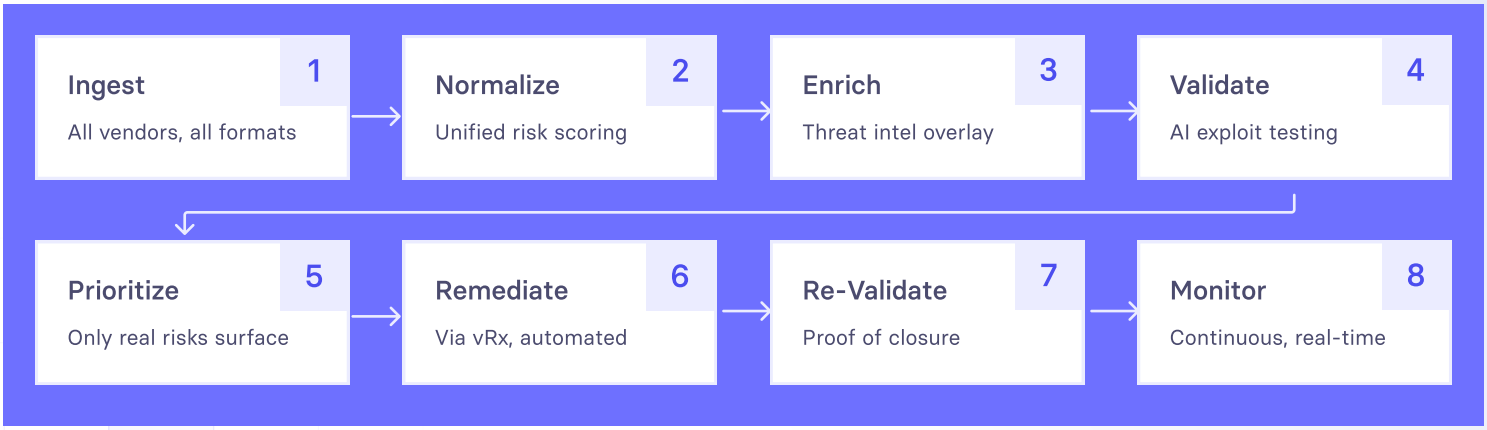

Vulnerability Management

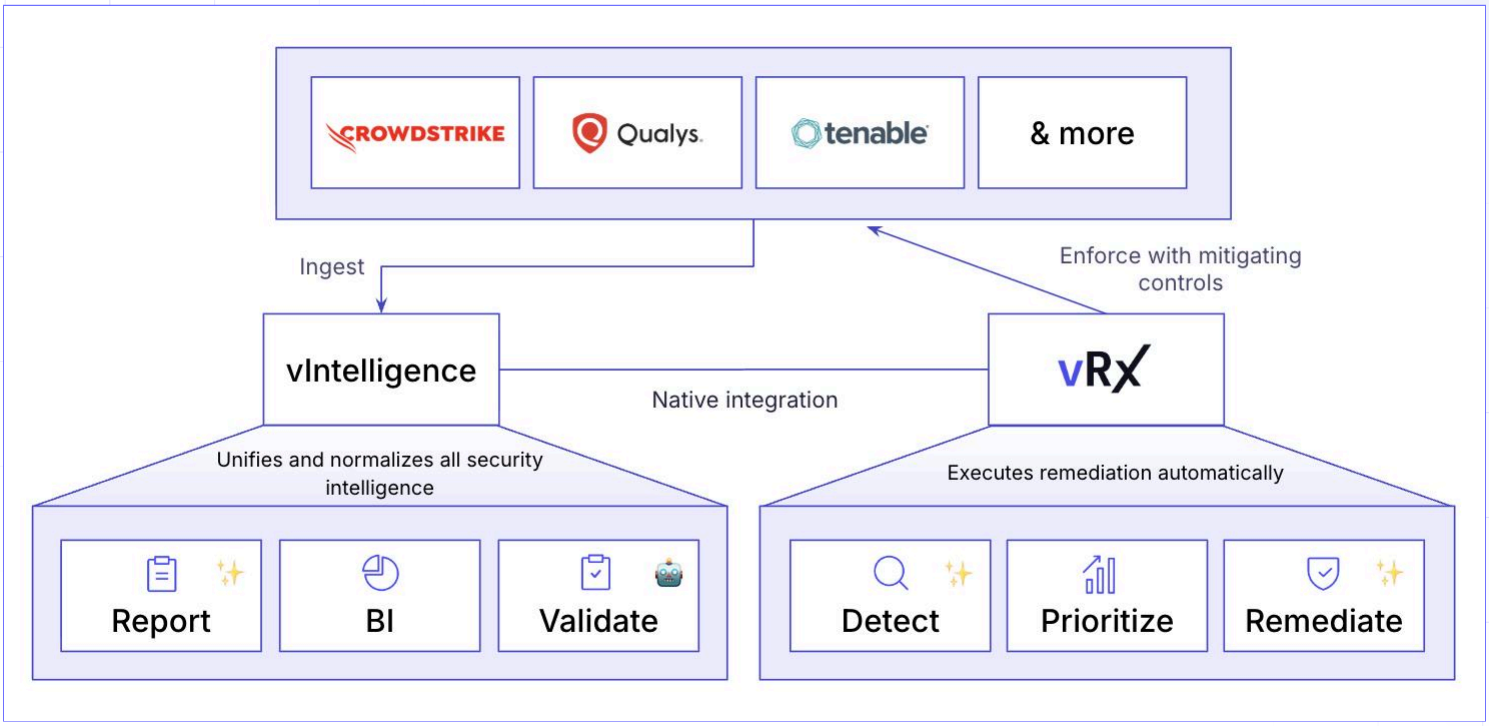

One normalized view across all your exposure providers, no more reconciling conflicting data from Tenable, Qualys, CrowdStrike and others.
Unlimited CVE coverage with AI-generated validation scripts, not limited to predefined attack scenarios.

CISO & Leadership

Board-ready reporting on exposure posture, remediation velocity, and compliance status with full audit trail.
Regulatory confidence – auditable proof of closure for multiple compliance frameworks, and cyber insurance mandates.

How it works – the closed loop
