## Stop the Remediation Theater

With nearly 5,000 new vulnerabilities identified every single month, detection is no longer enough. Vicarius vRx is built to close the loop between discovery and resolution.

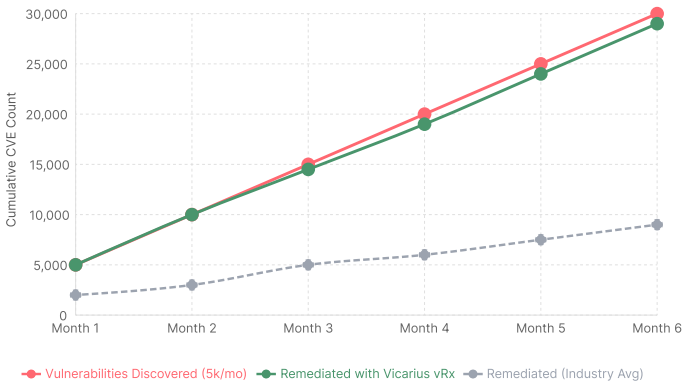

### The Dangerous Gap

**What is the remediation theatre?**

Most vendors call this remediation:
Scan. Detect. Open a ticket.

It isn't remediation. It's delegation.

- Passing a report to IT doesn't reduce risk, it just shifts responsibility.
- True remediation means closing the loop by fixing the issue automatically.

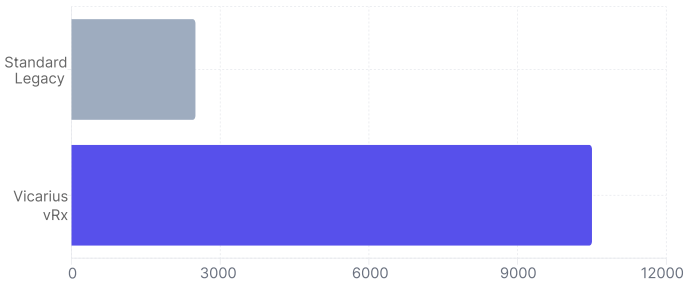

### Consolidation of the Stack

vRx consolidates OS patching (Windows, macOS, Linux) alongside 3rd party apps, scripting, and patchless protection into one unified platform.

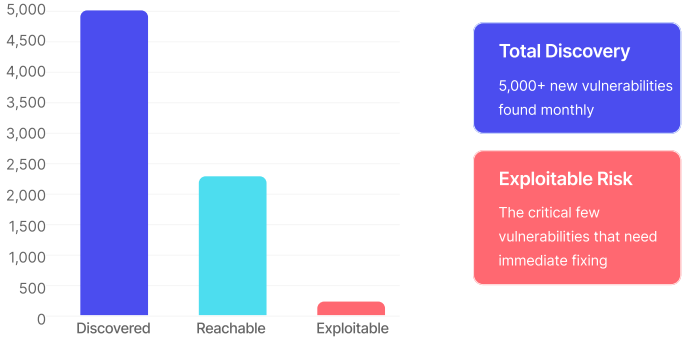

### Unmatched Application Support

Most tools handle Windows updates but fail on 3rd party apps. Vicarius supports over 10,000 applications, ensuring that the software your team uses is secure

### Context Driven Prioritization

Traditional tools rely on CVSS, creating noise and alert fatigue. Vicarius combines exploit intelligence, EPSS, KEV, and asset context to surface the ~5% of vulnerabilities that are actually exploitable.

## How vShield Works – Patchless Protection

When a patch isn't available (Zero-Day) or you can't afford downtime, vShield creates a memory-level shield. This stops exploitation instantly without reboots.

### Threat Detected

Zero-day exploit attempt.

### vShield Activates

In-memory protection shield.

### Attack Neutralized

No downtime required.

### Custom Resolution Engine

Deploy custom remediation logic for complex configuration issues.

**OS**
